

STEEL FILTRATION VESSELS - LV & MV SERIES

VERSATILE VESSELS FOR LONG AND SHORT TERM PROJECTS

The Steel Filtration Vessels LV & MV Series are versatile adsorption systems designed to contain CETCO's GAC and PM-100 media. Systems may contain other media in appropriate circumstances. These units are designed for either long term installations or the rigors of handling short term projects as rental units.

TREATMENT APPLICATIONS

Standalone treatment
Pre-treatment
Post-treatment

LV-MV SERIES

The LV units contain top manways with quick-release style and are 14" x 18" for easy access, except for LV-500 that is supplied with a 12" x 16" manway.

The MV units also have 14" x 18" elliptical top manways, including an 18" side manway for accessible clean out.

All units are provided with forklift channels to facilitate mobility, which also function as supports. A bottom drain fitting is supplied for removing liquid below the outlet. The liquid collection system inside the Steel Filtration Vessels LV & MV Series is 304 SS and is designed to promote even flow distribution for more efficient adsorbent utilization.

Specifications and properties are subject to change without notice.

Our Standards. Your Peace of Mind.

CETCO offers a comprehensive portfolio of products, services, and innovative solutions to handle complex fluid challenges. Our customized engineered solutions, patented technologies, and operational experience make CETCO the clear choice for all of your fluid treatment and wastewater requirements.
